SECURING YOUR WORLD

SECURITY FIRST MAKES PHOENIX The World's Most Secure Revolving Door.

Access Control: The Phoenix 3W revolving door is designed for today's facilities that require one-way security only. The Phoenix 3W revolving door includes Anti-tailgating as the main security function, and is designed to allow for a high level of pedestrian traffic where a security scheme calls for controlled traffic in one direction, either into or out of your facility. The anti-tailgating feature will stop unauthorized access from a person attempting to gain access in a trailing quadrant, or to prohibit access to a person attempting to gain access from the non-secure side of the door.

State of the Art Drive System: Will not slow or discontinue operation in cold climates.

One-way security: one-way security with free egress.

Digital Voice Enunciators: Allows the door to communicate to users when security violations are detected.

Outside Stile Safety Sensors: These sensors stop the door should an arm, bag or briefcase become wedged between the wing and wall. The safety sensors will eliminate possible injuries and eliminate damage to trapped items.

Active Scanning: Continuous monitoring of all quadrants for possible security breaches.

Built in quadrant messages and traffic lights for the hearing impaired.

Wireless Handheld Programming Device: For extra convenience.

Controllers can be offsite in a security room for ease of service, programming and control.

Phoenix 3-Wing One-Way Security Revolving Door

Common Installations include corporate facilities, government installations, banking systems, etc.

Feature Summary

- Controlled one way security
- Simultaneous entry and exit
- Anti-tailgating detection
- Electromagnetic wing locks
- Collapsible wings (for emergency situations)
- Use of infrared sensors for stable, reliable detection
- Automatic, continuous monitoring of the health of critical sensors
- Easy to use built-in test routine
- Incremental 360 degree digital encoder for accurate positioning
- Recorded messages assist users during violations and safety events
- Easily adjustable door speed
- Trapped person sensor
- No visible joints: available on stainless and bronze doors
- 3-wing design
- Quadrant traffic lights
- Ceiling indicator lights
- Continuous active scanning
- Adjustable weather-stripping on wings reduces maintenance costs.
- BOCA and IBC complaint

Benefits include:

- **Significant cost savings** through automation
- **Significant cost savings** through minimized A/C and heating losses
- Asset protection
- Personnel protection
- Convenient guard free entrance control solution

Options

- Day / Night operation
- Large 7'6", 8' or 8'6" diameter
- Bullet Resistant doors to Level-3 are available. Please call for more information.
- Comet clear view wings available
- Wireless handheld programming device
- Controllers can be offsite in a security room for ease of service, programming and control.
- Choice of finishes
- Ceiling lights
- Tinted glass
- Solid side walls
- Custom height wing and wall post sightlines available
